- [UTM Tracking in Order 2 Step](#)
- [Append UTMs to the CTA \(Button\)](#)

Tracking UTMs in Click Funnel

Add custom parameters to your optin form in Click Funnel

Make sure you are not calling them as `utm_*` as they conflict with Click Funnel's internal UTM tracking system. We recommend adding parameters like this...

```
handl_utm_campaign  
handl_utm_source  
handl_utm_medium  
handl_utm_term  
handl_utm_content
```

Make sure the new fields type is "Custom Type"

Fill out each custom paramter as shown below

Add the custom parameters to your form

A screenshot of a form interface with a dark blue background. The form consists of several white input fields stacked vertically. The first field contains 'HandL Grabber Test' and has a person icon on the right. The second field contains 'support+test7@utmgrabber.com' and has an envelope icon. The third field contains '5122002323' and has a mobile phone icon. Below these are four more empty input fields containing the text 'campaign', 'source', 'content', 'term', and 'medium' respectively. At the bottom center is an orange button with the word 'SUBMIT' in white capital letters.

UTM Tracking in Order 2 Step

As you know you can't add fields in Order 2 Step. But you can do this via adding some JavaScript code...

Add the following code on "Head Tracking Code"

The screenshot shows the ClickFunnels interface for editing funnel settings. The left sidebar contains a 'LAUNCH CHECKLIST', 'FUNNEL STEPS' (with 'Checkout' and 'Upsell #1' visible), and 'OTHER FUNNEL STEPS'. The main area is titled 'Edit Settings For This Funnel' and contains several sections: 'NAME' (with a text box containing '[THD - FB]'), 'GROUP TAG' (with an empty text box), 'DOMAIN' (with a text box and a link to 'Add/Edit Domains'), 'PATH' (with an empty text box), 'SMTP CONFIGURATION' (with a text box and a link to 'Account SMTP Settings'), 'FAVICON URL' (with an empty text box), 'HEAD TRACKING CODE' (with a text box containing a JavaScript code snippet), and 'BODY TRACKING CODE' (with a text box containing a JavaScript code snippet). The 'HEAD TRACKING CODE' section is highlighted with a red box.

The code looks like below. DON'T forget to change `<YOUR_LICENCE_KEY>` with your license key.

```
<!-- Global site UTM Simple Tracking Start-->
<script>
handl_custom_params=['_fbclid','_fbq'];var
handl_js=document.createElement("script");handl_js.setAttribute("src","https://track.utmsimple.com/");
handl_js.onload=function(){
setTimeout(
function(){
window.all = HandL.getAll()
}
```

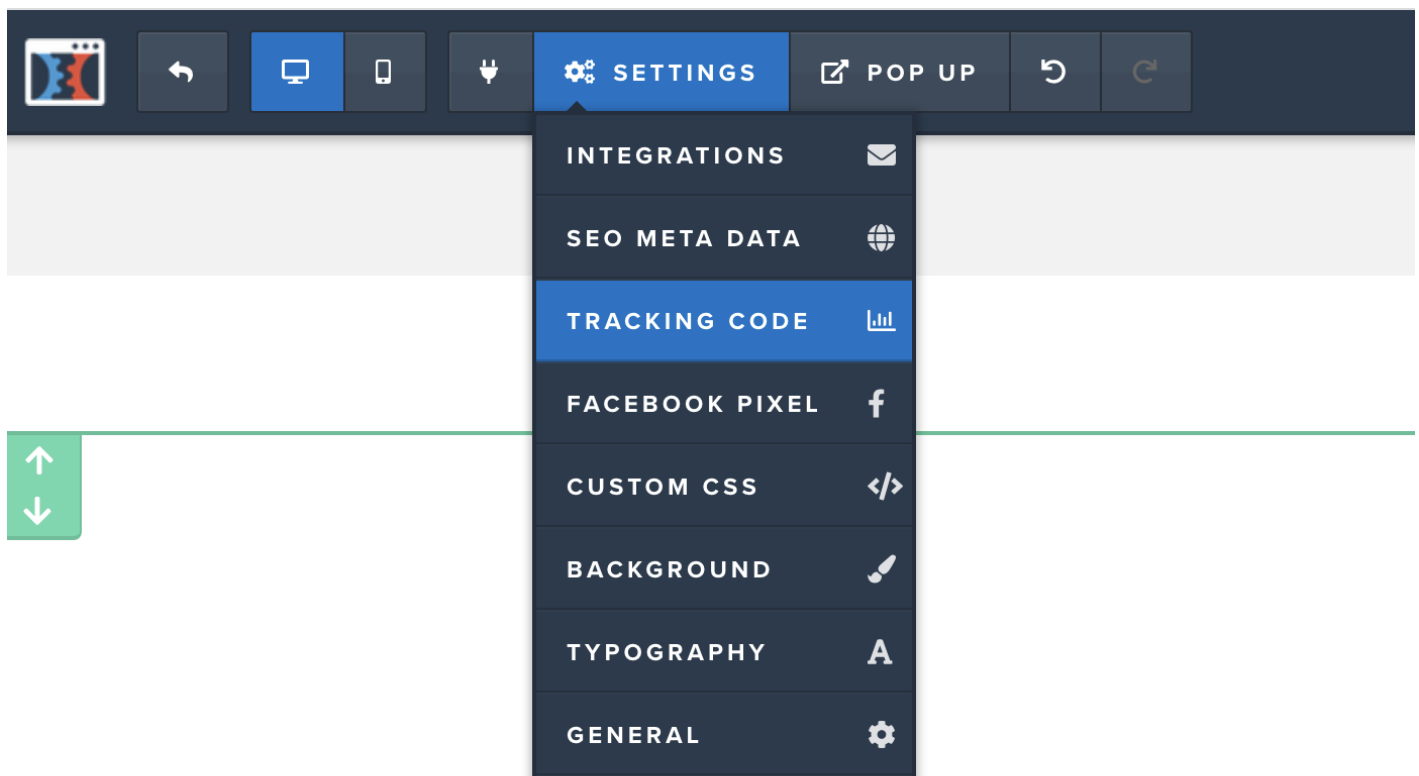

```

Object.keys(all).forEach( (x) => {
  if ( all[x] ){
    if ( $('.o2step_step1').length > 0){
      $(' .o2step_step1').prepend(`<input type="hidden" data-custom-type="handl_${x}"
class="elInput" name="custom_type" value="${all[x]}" />`)
    }
  }
})
}, 1000
);
</script>
<!-- Global site UTM Simple Tracking End-->

```

BONUS: Trigger Zapier when checkout initiated...

Add the following code under Settings > Tracking Code (Footer Section)

TRACKING CODE

</> HEADER CODE

</> FOOTER CODE

```

1 <script>
2 setTimeout(
3     function(){
4         document.getElementsByName("email")[0].addEventListener('change', funct
5             var data = {};
6             handlJ(handlj('form')[2]).serializeArray().map(function(x){data[x.n
7             data = Object.assign(data,HandL.getAll())
8             var names = handlJ('[name="name"]').val().split(" ")
9             data['fname'] = names[0]
10            names.shift()
11            data['lname'] = names.join(" ")
12            data['email'] = handlJ('[name="email"]').val()
13
14            data['cur_url'] = window.location.href
15            data['product_id'] = $("input[name='purchase[product_id]']")[0].val
16

```

```

<script>
setTimeout(
    function(){
        document.getElementsByName("email")[0].addEventListener(' change', function( evt) {
            var data = {};
            handlJ(handlj(' form')[2]).serializeArray().map( function( x){data[ x. name] = x. value;});
            data = Object. assign( data, HandL. getAll())
            var names = handlJ('[ name="name"]').val().split(" ")
            data[' fname' ] = names[ 0]
            names. shift()
            data[' lname' ] = names. join(" ")
            data[' email' ] = handlJ('[ name="email"]').val()

            data[' cur_url' ] = window. location. href
            data[' product_id' ] = $("input[ name=' purchase[ product_id' ]'") [ 0]. value

            console. log( data)
            var json = JSON. stringify( data);
            var xhr = new XMLHttpRequest();

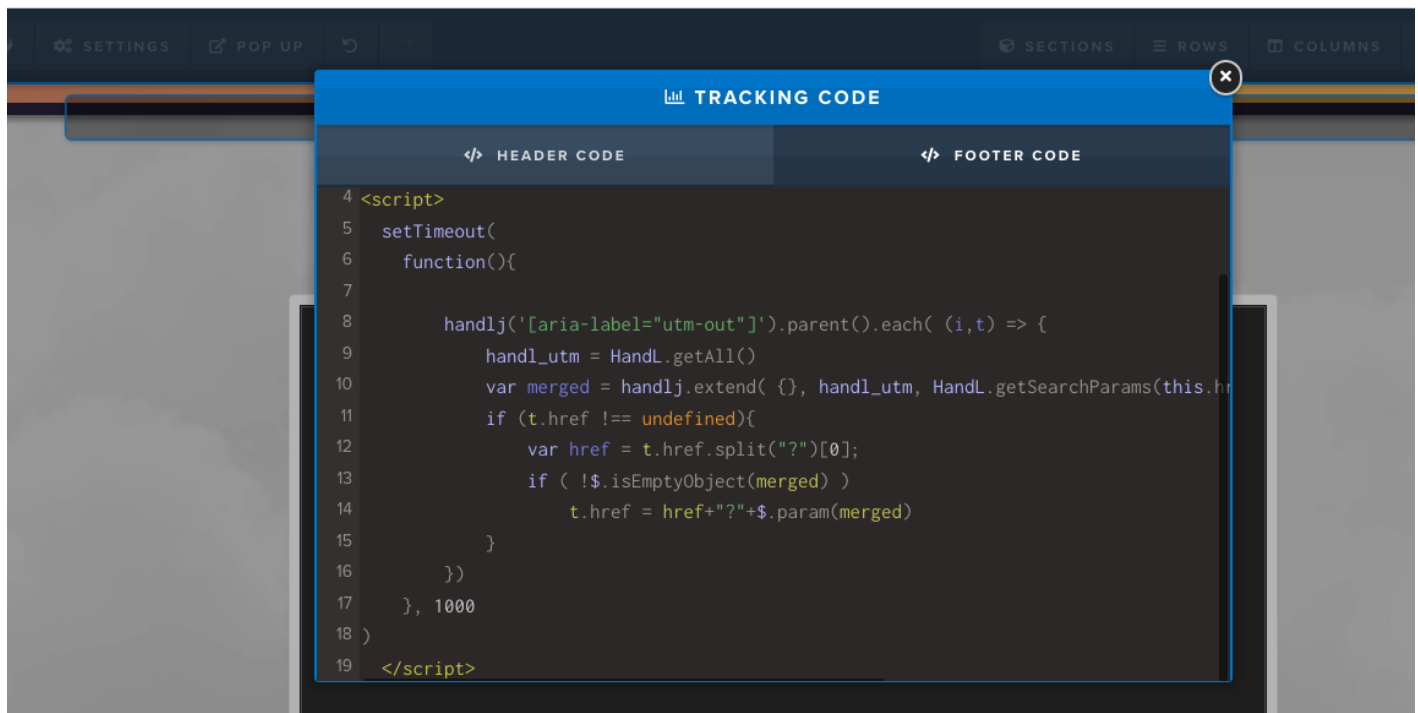

```

```
data = new URLSearchParams( data).toString()
var xmlhttp = new XMLHttpRequest();
xmlhttp.open( "GET", ' https: //hooks. zapier. com/hooks/catch/xxxxxxx/yyyyyy/?' + data, true);
xmlhttp.send( null);
});

}, 500
)
</script>
```

Append UTMs to the CTA (Button)

You can add to Tracking Code section in the page...

```
setTimeout(
  function(){

    handlj('[aria-label="utm-out"]').parent().each( (i,t) => {
      handl_utm = HandL.getAll()
      var merged = handlj.extend( {}, handl_utm, HandL.getSearchParams(this.href) )
      if (t.href !== undefined){
        var href = t.href.split("?")[0];
        if ( !$.isEmptyObject(merged) )
          t.href = href+"?"+$$.param(merged)
      }
    })
  }, 1000
)
```
