Pass UTMs to embedded JotForm

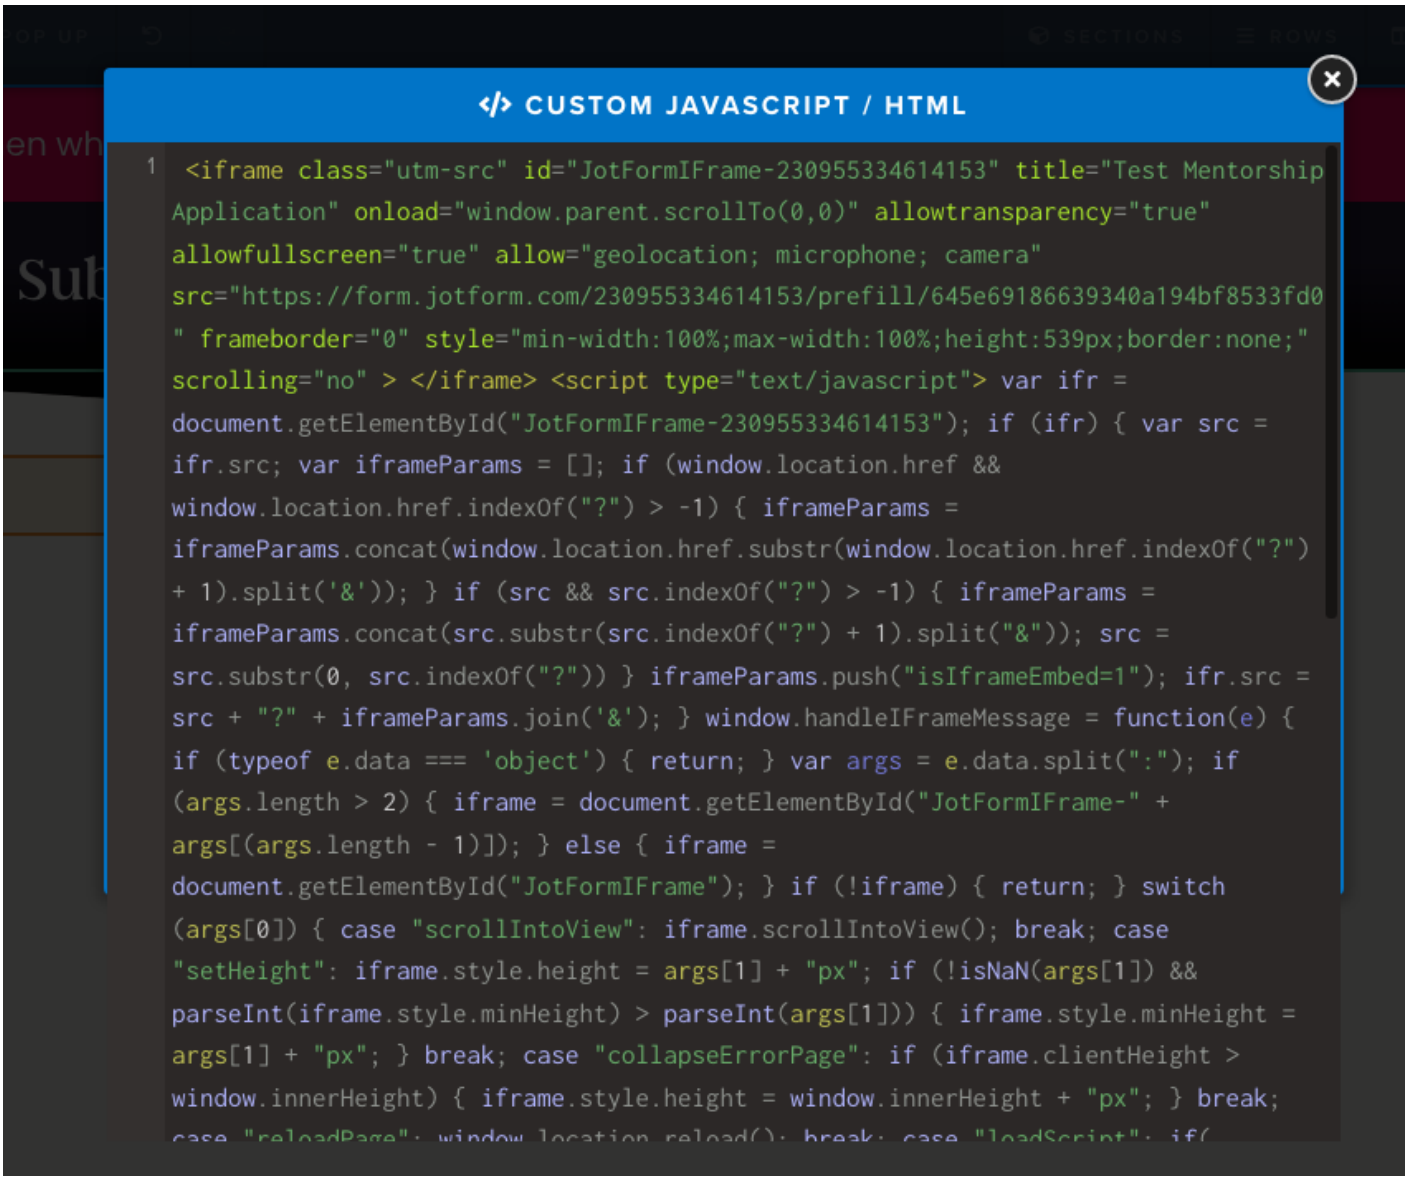

Create hidden fields to your form

Unique Name is key, it should match with our naming convention

Embed iframe in your site

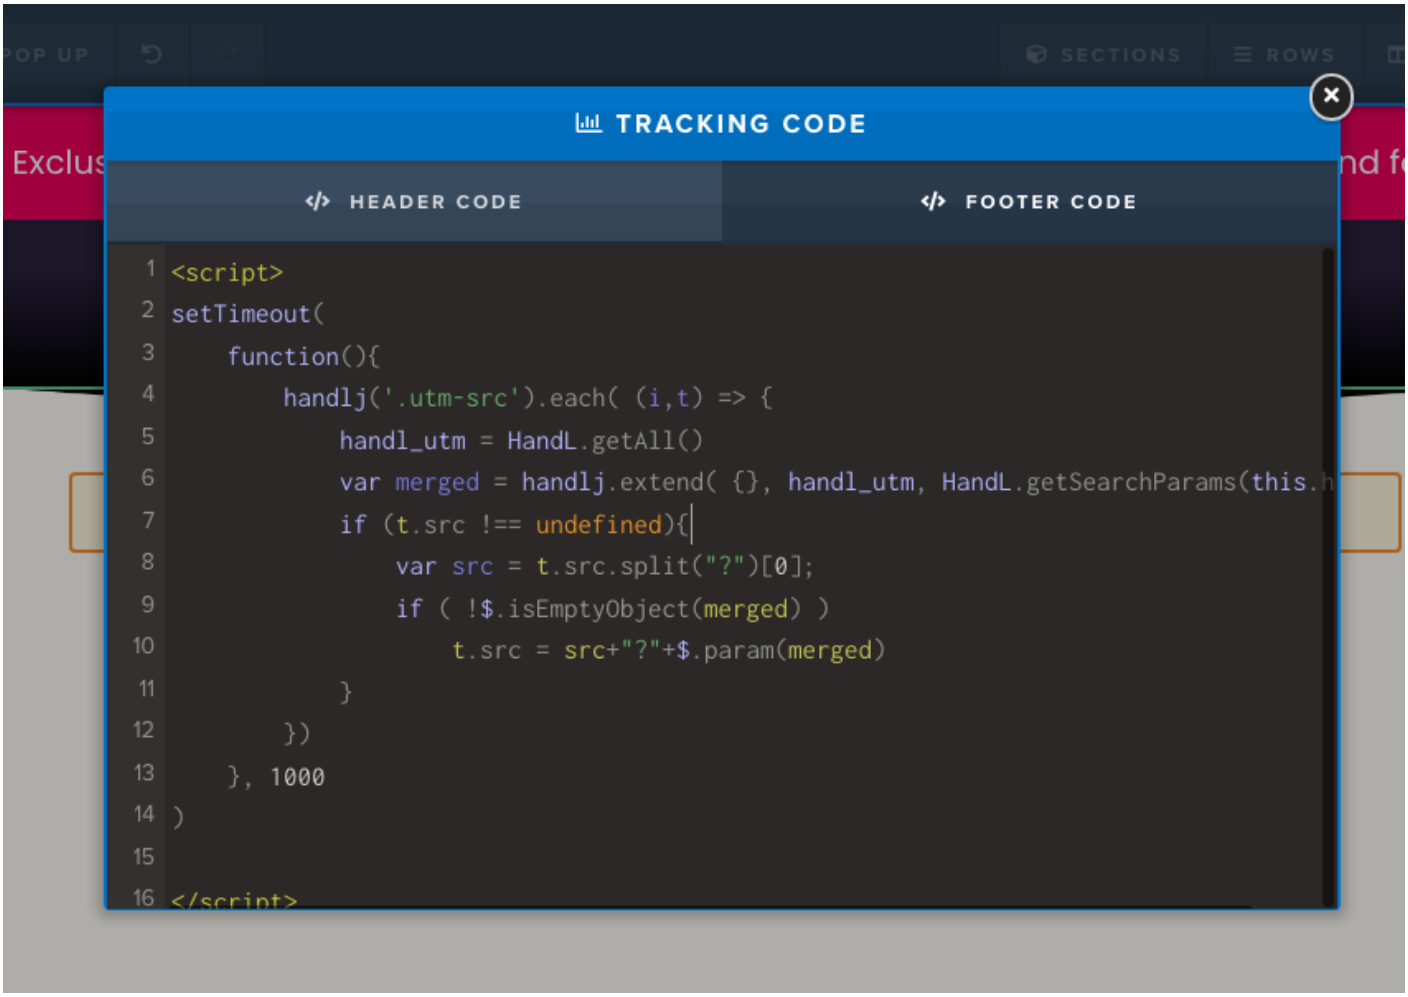

Append class as `utm-src` as seen in the pic

Add the following script

```
<script>
setTimeout(
function(){
handlj('.utm-src').each( (i,t) => {
handl_utm = HandL.getAll()
var merged = handlj.extend( {}, handl_utm, HandL.getSearchParams(this.href) )
if (t.src !== undefined){
var src = t.src.split("?")[0];
if ( !$.isEmptyObject(merged) )
t.src = src+"?"+$.param(merged)
}
})
}, 1000
)
```

```
</script>
```

If the above solution does not work... Try this...

```
<script>
setTimeout(() => {
if (typeof(handlj) == 'function'){
var iframeParams = [];
iframeParams.push( handlj.param(handlj.extend({}, HandL.getUrlVars(), HandL.getAll())) )
var src = ifr.src;
ifr.src = src + "?" + iframeParams.join('&');
}
}, "500");
</script>
```
